

Career Summary

Fullstack Engineer, 7+ years building and running production systems with Python (Django, Flask, FastAPI), JavaScript (React, TypeScript), Docker, and Kubernetes on AWS and Azure. I've split monoliths into manageable repos, cut deploy times from 5 minutes to 30 seconds, and kept services running for thousands of users across government, energy, automotive, and construction. Currently owning 5 microservices at Globant/Autodesk. Reduced production incidents by 50% through improved testing practices and monitoring. Mentored 3+ engineers to independent contributors within their first quarter

Summary of Qualifications

- Python/JavaScript/TypeScript, Kotlin, Java
- Django, Flask, FastAPI, React, Spring Boot, Vue.js
- Docker, Kubernetes, Jenkins, GitHub Actions, AWS, Azure, Heroku
- Datadog, Splunk, Dynatrace, PagerDuty
- Postgres, MongoDB, Oracle

Languages

- Spanish (native - C2)
- English (advanced - C1)

Career History

Globant / Autodesk, Backend Engineer (Apr 2024 - Present)

Responsibilities:

- Own 5 Python/Flask and Kotlin microservices behind Forma mobile app for thousands of firms. Handle monitoring, incident response, and feature work
- Took on the security champion role for the team — set up dependency scanning, rotated secrets, tightened auth flows across 2 services
- Rewrote a legacy HTML-based testing dashboard in React/TypeScript. ~4,000 developers across the company use it daily to run and aggregate multitenant test suites. Maintained average response time under 200ms
- Onboarded 3 new engineers to the team — wrote up service documentation, walked them through the codebase, and paired on their first PRs until they were shipping independently

Tools:

- Python, Flask, Kotlin, React, TypeScript, Docker, Kubernetes, Jenkins, GitHub Actions, AWS, Datadog, Splunk, Dynatrace, PagerDuty

Lean Group / Carvana, Full Stack Engineer (Apr 2022 - Apr 2024)

Responsibilities:

- Broke a monolithic Django + React app into separate frontend and backend repos. Set up new databases, test suites, and pipelines for each. This cut build times by 70% and made deployments independent
- Got deployment time down from ~5 minutes to ~30 seconds by adding Docker layer caching and Multi-Stage Builds to the pipeline and image
- Moved the CI/CD stack from AWS to Azure, running Docker containers on Kubernetes (Rancher).
- Wired up Okta SSO for ~2000 users. Replaced a homegrown auth system that was a constant source of bugs
- Migrated a live app to new domains without downtime, ~2000 users didn't notice

Felipe Restrepo

Software Engineer

Medellín, Colombia (GMT-5)
(+57) 301 7839876
maferelo13@gmail.com
linkedin.com/in/mf-restrepo
github.com/maferelo

- Led most of the time the standups and constantly did code reviews for a team of 8 engineers

Tools:

- Python, Django, React, TypeScript, Docker, Kubernetes, Rancher, Azure DevOps, Okta

Carvajal Tecnología y Servicios - Full Stack Engineer (Aug 2021 - Mar 2022)

Responsibilities:

- Took a set of Oracle queries that were taking ~2-3 hours and got them down to ~20-40 minutes. Mostly index tuning and normalization
- Wrote ETL jobs on S3 and Python to handle thousands of transactions feeding into the invoice management app for users on more than 4 countries

Tools:

- Java, Spring Boot, Oracle Database, AWS (S3)

Superintendencia de Servicios Públicos Domiciliarios - Full Stack Engineer (Jan 2020 - Dec 2021)

Last months overlapped with Carvajal — transitioned out while onboarding there

Responsibilities:

- Conducted ETL processes on data from the Colombian energy market, aiding in the identification of pricing irregularities through collaboration with a team of analysts
- Algorithm Optimization: Assisted in the implementation and optimization of data-intensive algorithms, converting them for use in a Flask backend and developing corresponding views with Vue.js

Tools:

- Python, Flask, [Vue.js](https://vuejs.org/), Pandas, Numpy

3S INGENIERÍA ESPECIALIZADA, Full Stack Engineer (Jan 2018 - Dec 2019)

Responsibilities:

- Built a budgeting app from scratch for traffic and road signaling projects (Django, React, Heroku). It's still running internally 5 years later with ~40 users.
- Ran 6 signaling projects end to end, ~300,000USD in total budget. Handled client requirements, contractor coordination, delivery timelines

Tools:

- Python, Django, React, Heroku, PostgreSQL

Education

Universidad EIA, Medellín, Colombia

- B.S. Civil Engineering (2010 - 2015)

Universidad Nacional, Medellín, Colombia

- Specialization in Artificial Intelligence (2023 - 2025)
